<https://docs.google.com/spreadsheets/d/1C72zcHtwpNDnBycgrcH8y2lWDW8r2gAOE2tsl8KKpGY/edit?usp=sharing>

Blog Sites:

www.medium.com

<https://www.blogger.com>

<https://www.github.com> or any other tech blog/blogging sites.

****Task 1:** Set up your tech blog space for the final project. This is where you will be writing about your final projects. Go to the above spreadsheet and report your group members, topic, and blog address.

Update your tech blog using the contents from Assignment 3. At the top of your blog, you should have a table of contents (I will give a slightly different instruction for those groups doing NUGU projects. I will explain more in class). The recommended format is the following:

Title of your project

Members: Name1, Department, University, Email
Name2, Department, University, Email
Name3, Department, University, Email ...

I. Introduction

- Motivation: Why are you doing this?
- What do you want to see at the end?

II. Datasets

- Describing your dataset

III. Methodology

- Explaining your choice of algorithms (methods)
- Explaining features or code (if any)

IV. Evaluation & Analysis

- Graphs, tables, any statistics (if any)

V. Related Work (e.g., existing studies)

- Tools, libraries, blogs, or any documentation that you have used to do this project.

VI. Conclusion: Discussion

Feel free to use any format you like. By **due date A**, I expect to see some of the sections filled.

****Task 2:** Video or Sound recording via YouTube or any others. You will be recording video or sound of explaining your tech blog contents and demo (if any). The length should be around 10 minutes, do not make it too long. It will be something similar to our class video (SKT video as well) or you can simply record your voice only. You can show any coding screen or scrolling up/down your blog or whatever you felt it's necessary. Upload to YouTube (or any other similar service) and share the link in your tech blog. In essence, it will be your presentation to me.

Table of contents ...

Video/Audio link (embedded if possible): www.sample.com/sample

Note:

1. Your final blog should be no less than 4 pages (double column, http://www.ieee.org/conferences_events/conferences/publishing/templates.html).
2. **Important: No late submission is allowed. It is your responsibility to meet the deadlines.**

Submission details:

For A. Print a copy of your **blog in progress** and submit it in class. Write down whatever you have so far. Desirably, I'd like to see the sections written up to II, perhaps section IV as well?

For B. Print a copy of your **final blog** and submit it. A full version should be done by this time. And you will be doing a short presentation in my office.

For C. I will be looking at your tech blog and decide your final grading until Dec. 17.
